# **Heatfab Saf-T Vent® CI 316**

Double Wall  
One Inch Air Space  
316L Stainless Steel  
Special Gas Vent

---

For Venting Commercial & Industrial Applications

Condensing Appliances

Category I,II,III,IV Appliances

For Use on Negative, Neutral and Positive Pressures (up to 15" W.C.)

Also for Venting Listed Gas or Oil Fired Appliances Listed as suitable for  
Venting with Type L Vent Low-Temperature Venting Systems

Sizes: 4" - 24" Diameters

Tested and Listed  
UL 1738, ULC S636  
UL 641, ULC-609 and ULC/ORD-441  
by Underwriters Laboratories, Inc.

# Heatfab Saf-T Vent® CI 316

## Introduction:

Saf-T Vent CI 316 is a 316L stainless steel conduit with a one-inch air space and a type 430 stainless steel outer jacket. It is ideal for close clearance installation within building chases.

Saf-T Vent CI 316 combines the tight fit of the tapered male and female expands with a closure system which consists of tabs and a locking strap. The locking strap provides a mechanical connection between the two assembled sections. It also serves to pull together the two pieces, making a pressure-tight assembly. The locking strap is tightened from a single location using a simple hand tool. This single-point fastening system allows one installer to complete an assembly without rotating the sections or rotating himself around the sections.

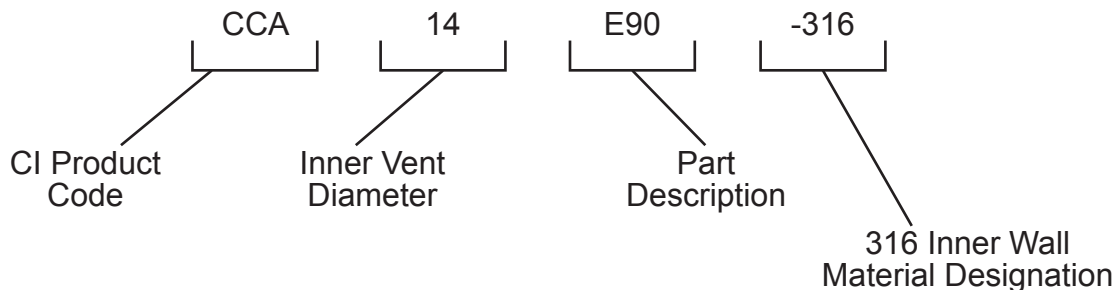

The double-wall construction allows for an insulating blanket of 1" air space between the inner wall and the outer wall. This air insulation has the advantage of keeping the flue gases warmer as well as making the skin temperature of the outer wall cooler. The reduced skin temperature allows the product to be installed in closer proximity to combustible materials. Refer to the installation instructions for Heat-fab's Saf-T Vent CI 316 system.

Select components are constructed with alternate materials and are not designated with a -316 suffix. These components include terminations, supports, flashings, and penetrations. Installations can be comprised of CI 316 and CI Plus components.

\*\*CI 316 is also available with fiberglass insulation between the walls (ICC.... part codes) for further skin reduction temperatures. Clearances to combustibles remain the same as 1" airspace model.

## Part Numbering System for CI 316

# Heatfab Saf-T Vent® CI 316

## Typical Outside Skin Temperature 6" Diameter at 4 Hour Continuous Operation

			Location Ⓐ	Location Ⓑ	Location Ⓒ	Location Ⓓ	Location Ⓔ	Location Ⓕ

# Heatfab Saf-T Vent® CI 316

## Material Thickness:

Inner Vent Diameter	Wall Thickness – Inner Vent	Wall Thickness – Outer Jacket
4 – 8"	0.015" (28 ga)	0.024" (24 ga)
9 – 16"	0.020" (26 ga)	
18 – 24"	0.025" (24 ga)	

## Field Applied Sealant (18" - 24" Inner Vent Diameter):

In order to have a UL Listed system, Model CI Plus/CI 316 components without a factory adhered gasket/seal must be installed with one of the approved sealants:

Maximum Appliance Flue Gas Temperature	U.L. Listed Heatfab Sealant	Size	U.L. Listed Heatfab Sealant Part Number
550° F	Silicone	2.8 oz.	7000RTV
		10 oz.	7000RTVL
	Viton/FKM	12 oz.	7000FKM

## Approximate Coverage

The table below shows the approximate number of installed joints that can be completed with a container of sealant. These figures are based on a 1/4" bead of sealant. Actual coverage may vary.

Note: In planning the sealant required for an installation, please be aware that certain fittings require additional sealant in order to achieve a proper positive-pressure seal. The following types of parts should be counted as 2 joints toward the Sealant coverage table:

- Boiler Starters
- Adjustable Sections
- Flue Collar Adapters
- Boot Tees

\*Diameters 4" thru 16" are manufactured with a factory-installed integral gasket and will **not** need sealant in the joint.

## Factory Installed Gasket - Lubricant:

It is required to apply gasket lubricant (p/n 7001SIL-5, sold separately) to the factory-installed integral gasket when assembling the pipe. Apply lubricant directly to the gasket on the inside female pipe end, both edges of gasket. Reference installation manual.

## Accessories:

**Universal Boiler Adapter** — Used horizontally or vertically to adapt Saf-T Vent CI to nominal diameter flue collars, it can also adapt to boiler collars that are slightly out of round. The adapter comes with a joint locking strap, boiler collar clamp and a coupler band.

Part Number	DIM - A Nominal Inner Diameter	DIM - B Nominal Diameter Outer Jacket
CCA04ADUV	4	6.3
CCA05ADUV	5	7.3
CCA06ADUV	6	8.3

## Accessories:

**Fire Stop** — A firestop may be required anytime Saf-T Vent CI 316 penetrates combustible floors, walls, or ceilings. Remove any insulating material from the floor, wall or ceiling cavity for at least 1" around the vent for diameters 4" - 24". Review fire codes and consult with local building code officials to determine the necessity for a firestop. The stainless steel firestop may be trimmed provided the required clearances are maintained.

**Condensate Drain Tube Kit** — This kit contains a length of high temperature silicone rubber tubing, a clamp, and two cable ties. The silicone tubing is rated for 500°F, and is translucent to allow inspection of the P-trap. Larger diameter drains can be plumbed directly into a drain system.

Part Number:	7000TUBE	5 feet of 3/8" diameter tubing
	7000TUBE-10	10 feet of 3/8" diameter tubing
	7001TUBE	10 feet of 1/2" diameter tubing

# Heatfab Saf-T Vent® CI 316

## Accessories:

**In-Line Damper Section** — Use to adjust the flow in positive pressure applications. Can also be used to restrict back flow when the appliance is off. Each damper comes with an 18" long coupler, a locking strap, a rotating clamp, and a motor platform. The shaft is 3/8" diameter.

Part Number	DIM - A Nominal Inner Diameter	DIM-B Nominal Diameter Outer Jacket

# Heatfab Saf-T Vent® CI 316

## Accessories:

**In-Line Probe Section** — Use to attach probes to the vent system by means of a 1/4" NPT female fitting. Can be used vertically or horizontally. Comes standard with a coupler made of 430 stainless steel with an outlet for the probe fitting, a 1/4" NPT plug, a locking strap and a rotating clamp for directional changes.

# Heatfab Saf-T Vent® CI 316

## Accessories:

**Horizontal/Vertical In-Line Drain Section** — Use to drain away condensate from the vent system. The unique design of this part allows it to be installed in a horizontal, vertical or inclined orientation. Continuous horizontal runs in excess of 30 feet require a condensate drain. High temperature silicone tubing is available separately. The outer jacket consists of an 12" long coupler made of 430 stainless steel with an outlet for the drain and also comes standard with a locking strap and a rotating clamp.

Part Number	DIM - A Nominal Diameter Inner Diameter	DIM - B Nominal Diameter Outer Jacket	DIM - C Installed Length	DIM - D Drain Diameter OD

**Coupler (included)**

**In-Line Drain Section**

**Drain Tube Kit (sold separately)**

# Heatfab Saf-T Vent® CI 316

## Boot Tees & Covers:

**Tee Cover with Drain Fitting** — Use at the base of a Boot Tee to drain away condensate from a vent system. High temperature silicone tubing is available separately. The drain cover comes standard with a locking strap and finish coupler. Other drain options are available on larger diameters upon request, contact Heatfab's Engineering Team.

\*1/2" female coupler

**Drain Cover**

# Heatfab Saf-T Vent® CI 316

## Boot Tees & Covers:

**Tee Cover**— Use to cap off the male end of a Boot Tee body that is installed horizontally. The tee cover / boot tee combination allows for the future addition of appliances to a common-vent system. The cover comes with a locking strap and a finish coupler that is made of the same 430 stainless steel as the outer jacket to give a finished look to the installation.

# Heatfab Saf-T Vent® CI 316

## Boot Tees:

**Boot Tee** — Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the boot tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop through the tap for this fitting is equivalent to 15 feet of horizontal vent. Both inlet connections rotate to accommodate direction changes. Each Boot Tee comes standard with a coupler, one joint locking strap and two rotating clamps.

**Boot Tee**

\*Also available as a Sloped Boot Tee to allow for easier upward pitch in horizontal runs; p/n .....SBT-316

\*\*Lateral 45 deg Tees (CCA\_LAT) & special Double Lateral Tees (aka Wyes and Double Wyes) are available upon request. Heights are the same as Boot Tees.

# Heatfab Saf-T Vent® CI 316

## Boot Tees with Reducing Tap:

**Boot Tee** — Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the boot tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop through the tap for this fitting is equivalent to 15 feet of horizontal vent. Both inlet connections rotate to accommodate direction changes. Each boot tee comes standard with a coupler, one joint locking strap, and two rotating clamps. Other diameter configurations may be available. Please contact Heatfab's Engineering Team to discuss your special needs.

# Heatfab Saf-T Vent® CI 316

## Square Tees:

**Square Tee** — Due to the significant pressure drop of this fitting, Heat-fab recommends it be used as an inspection port only. Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the square tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop through the tap for this fitting is equivalent to 45 feet of horizontal vent. Both inlet connections rotate to accommodate direction changes. Each Square Tee comes standard with a coupler, one joint locking strap, and two rotating clamps.

## Barometric Tees:

**Barometric Tee** — Use to attach a standard barometric damper (supplied by others) to the vent system. Use only if recommended by the appliance manufacturer and a qualified designer of vent systems. Each barometric tee comes standard with a coupler and a joint locking strap.

**Increasesers:**

**Increaser** — Use to upsize a vent system. The term “increaser” is based on an increase in vent diameter in the direction of flue gas motion. Increasesers are eccentric to allow for proper drainage of condensate when installed horizontally. Each increaser comes standard with a coupler that will fit the outlet diameter. Other diameter configurations may be available; please contact Heat-fab’s Engineering Team to discuss your special needs.

**Reducers:**

**Reducer** — Use to downsize the vent system when adding a fan to the system. The term “reducer” is based on an reduction in vent diameter in the direction of flue gas motion. Reducers are eccentric to allow for proper drainage of condensate when installed horizontally. Each reducer comes standard with a coupler that will fit the outlet diameter. Other diameter configurations may be available; please contact Heat-fab's Engineering Team to discuss your special needs.

## Adjustable Length:

**Short Adjustable Length** — The Saf-T Vent CI 316 Adjustable Section serves as a variable length between other components when specific lengths cannot be utilized. The installed length of the adjustable is 7" to 11". Each adjustable section comes with a joint locking strap and a coupler, which can be field cut. It is important to provide adequate support to a Saf-T Vent CI 316 system, refer to installation instructions for support specifications.

## Supports:

**Guy Support Section** — Provides vertical support using a part that is a flue-gas-carrying component of the vent system. Guy sections are primarily installed in long, inaccessible chases or used to provide support to systems with extended lengths above the roofline. Attach the guy section using stainless steel or galvanized cables or chain (supplied by others). Each guy section comes with a coupler and a joint locking strap. Refer to installation instructions for spacing between supports.

FLSUP24	24 (22" CI+)	32.68	29.68

**Vertical Support Plate** — Use as a vertical stack support. Can be used horizontally if needed. Field attached framework is supplied by others (underneath square plate), utilizing typical construction components such as angle iron or unistrut type material. Support section is fully assembled and includes a joint band. Refer to installation instructions for spacing between supports.

## Support Hangers:

**Horizontal Support for Large Diameter** — Typical for large diameter support. Provides horizontal support for the Saf-T Vent CI 316 system. Diameters 24" thru must have support every 6 feet of horizontal run. The support may be attached from the center of the bracket or from the sides of the support bracket. Support hangers by themselves do not maintain the necessary clearances to combustible materials; be sure to consider clearances when planning the system. Refer to installation instructions for spacing between supports.

Part Number	DIM - A Inner Vent Diameter	DIM - B Outer Jacket
CCM24HZS	24	26.3

**Center Attached Support**

**Side Attached Support**

**Support Clamp** — Typical for smaller diameter support. For use on horizontal systems to provide support at the required 6-foot intervals. Support clamps by themselves do not maintain the necessary clearances to combustible materials; be sure to consider clearances when planning the system. Support clamps are sold in pairs, with two half-shells, and two 1/4-20 nuts and bolts. This part is made from 18-gauge Type 304 stainless steel and should not be installed in the direct path of flue gases. Can also be used as guy support clamps, vertically as well as horizontally. Refer to installation instructions for spacing between supports.

**Support Clamp**

Used in pairs to clamp around the vent and suspend from a single rod or cable.

**Support Clamp**

Used singularly as a saddle to rest the vent in; suspend from two rods or cables.

# Heatfab Saf-T Vent® CI 316

## Supports:

**Roof Jack Support System**— For use with vertical terminations. Use to pass through combustible and noncombustible roof structures. The roof jack support system must be installed on a flat roof or a level curb only. Each roof jack support system includes a storm collar that provides support and when sealed, acts as a water barrier. Cannot be used in a chase with a 1" clearance to vent. Refer to Tall Cone Flashing. Refer to installation instructions for spacing between supports.

# Heatfab Saf-T Vent® CI 316

## Supports:

**Tall Cone Flashing and Support**— Use as a vertical roof penetration/support in conjunction with a combustible chase. Can be used with a roof curb if needed. Can be used on metal roofs with a 2-12 pitch. This part comes with a storm collar and support screws and is of all stainless steel construction. A Vented Termination Collar **must** be used when installed in a combustible chase and must be ordered separately. CAUTION: the support screws can **only** be installed with Saf-T Vent CI venting.

## Terminations:

**Rain Cap** — Use as a termination on vertical systems. Category I and II appliances require a raincap with wind protection. Vent systems for positive pressure appliances may omit the raincap if there are other provisions for draining rainwater from the system. The raincap may also be used as a horizontal termination. Each raincap includes a joint locking strap as well as a storm collar.
