Parts Catalog Technical and Dimensional Data

Heatfab Saf-T Vent® CI 316

Double Wall
One Inch Air Space
316L Stainless Steel
Special Gas Vent

For Venting Commercial & Industrial Applications
Condensing Appliances

Category I,II,III,IV Appliances

For Use on Negative, Neutral and Positive Pressures (up to 15" W.C.)

Also for Venting Listed Gas or Oil Fired Appliances Listed as suitable for Venting with Type L Vent Low-Temperature Venting Systems

Sizes: 4"- 24" Diameters

heatfab.

Tested and Listed UL 1738, ULC S636 UL 641, ULC-609 and ULC/ORD-441 by Underwriters Laboratories, Inc.

Introduction:

Saf-T Vent CI 316 is a 316L stainless steel conduit with a one-inch air space and a type 430 stainless steel outer jacket. It is ideal for close clearance installation within building chases.

Saf-T Vent CI 316 combines the tight fit of the tapered male and female expands with a closure system which consists of tabs and a locking strap. The locking strap provides a mechanical connection between the two assembled sections. It also serves to pull together the two pieces, making a pressure-tight assembly. The locking strap is tightened from a single location using a simple hand tool. This single-point fastening system allows one installer to complete an assembly without rotating the sections or rotating himself around the sections.

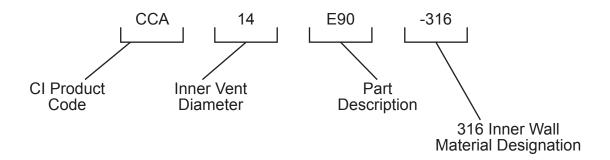

The double-wall construction allows for an insulating blanket of 1" air space between the inner wall and the outer wall. This air insulation has the advantage of keeping the flue gases warmer as well as making the skin temperature of the outer wall cooler. The reduced skin temperature allows the product to be installed in closer proximity to combustible materials. Refer to the installation instructions for Heat-fab's Saf-T Vent CI 316 system.

Select components are constructed with alternate materials and are not designated with a -316 suffix. These components include terminations, supports, flashings, and penetrations. Installations can be comprised of CI 316 and CI Plus components.

**CI 316 is also available with fiberglass insulation between the walls (ICC.... part codes) for further skin reduction temperatures. Clearances to combustibles remain the same as 1" airspace model.

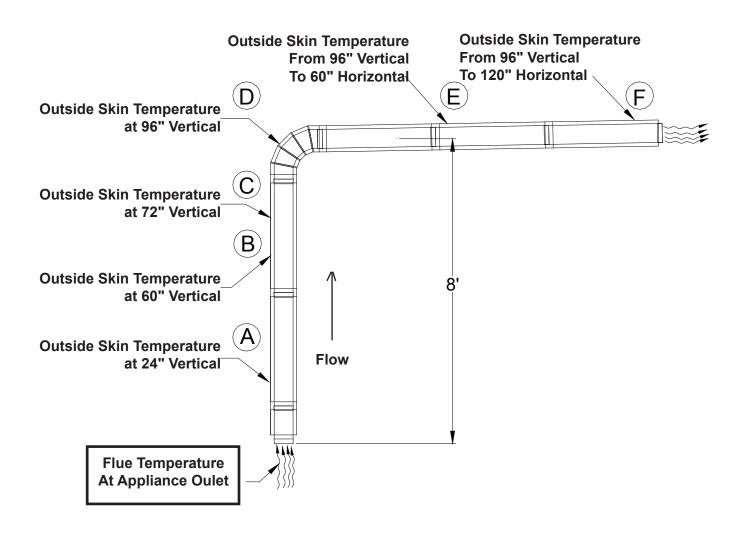

Part Numbering System for CI 316

Typical Outside Skin Temperature 6" Diameter at 4 Hour Continuous Operation

| | | | Location | Location B | Location | Location | Location | Location |
|-------------------------------------|---|--------------------------------|--------------|--------------|--------------|--------------|-------------------------------------|--------------------------------------|
| Model Double Wall 6" Diameter | Appliance Outlet Flue Temperature | Room Ambient Temperature | 24" Vertical | 60" Vertical | 72" Vertical | 96" Vertical | 96" Vertical & 60" Horizontal | 96" Vertical & 120" Horizontal |
| | | | | | | | | |
| Saf-T Vent CI 316 | 300°F / 149°C | 75°F / 24°C | 100°F / 38°C | 110°F / 43°C | 120°F / 49°C | 135°F / 57°C | 142°F / 61°C | 132°F / 56°C |

| Saf-T Vent CI 316 | 420°F / 216°C | 75°F / 24°C | 138°F / 59°C | 138°F / 59°C | 126°F / 69°C | 157°F / 77°C | 170°F / 77°C | 161°F / 72°C |

Material Thickness:

| Inner Vent Diameter | Wall Thickness – Inner Vent | Wall Thickness – Outer Jacket |
|------------------------|--------------------------------|----------------------------------|
| 4 – 8" | 0.015" (28 ga) | |
| 9 – 16" | 0.020" (26 ga) | 0.024" (24 ga) |
| 18 – 24" | 0.025" (24 ga) | |

Field Applied Sealant (18" - 24" Inner Vent Diameter):

In order to have a UL Listed system, Model CI Plus/CI 316 components without a factory adhered gasket/seal must be installed with one of the approved sealants:

| Maximum Appliance Flue Gas Temperature | | | U.L Listed Heatfab Sealant Part Number |
|---|-----------|---------|---|
| 550° F | Silicone | 2.8 oz. | 7000RTV |
| | Silicone | 10 oz. | 7000RTVL |
| | Viton/FKM | 12 oz. | 7000FKM |

Approximate Coverage

The table below shows the approximate number of installed joints that can be completed with a container of sealant. These figures are based on a 1/4" bead of sealant. Actual coverage may vary.

Note: In planning the sealant required for an installation, please be aware that certain fittings require additional sealant in order to achieve a proper positive-pressure seal. The following types of parts should be counted as 2 joints toward the Sealant coverage table:

Boiler Starters

Adjustable Sections

•Flue Collar Adapters

Boot Tees

Factory Installed Gasket - Lubricant:

It is required to apply gasket lubricant (p/n 7001SIL-5, sold separately) to the factory-installed integral gasket when assembling the pipe. Apply lubricant directly to the gasket on the inside female pipe end, both edges of gasket. Reference installation manual.

| Approx Number of Joints for Sealant | | | | | | |
|--|---|----|--|--|--|--|
| Inner Vent 3 oz 10 oz Diameter, Inches Tube Cartrid | | | | | | |
| | | | | | | |
| 18 | 4 | 14 | | | | |
| 20 | 4 | 13 | | | | |
| 22 | 3 | 12 | | | | |
| 24 | 3 | 11 | | | | |

| Approx Number of Joints for Lube | | | | | | |
|----------------------------------|-----------|--|--|--|--|--|
| Inner Vent Diameter, Inches | 5 oz Tube | | | | | |
| 4" | 25 | | | | | |
| 5" | 20 | | | | | |
| 6" | 19 | | | | | |
| 7" | 18 | | | | | |
| 8" | 14 | | | | | |
| 9" | 13 | | | | | |
| 10" | 10 | | | | | |
| 12" | 9 | | | | | |
| 14" | 7 | | | | | |
| 16" | 6 | | | | | |

^{*}Diameters 4" thru 16" are manufactured with a factory-installed integral gasket and will **not** need sealant in the joint.

Accessories:

Universal Boiler Adapter — Used horizontally or vertically to adapt Saf-T Vent CI to nominal diameter flue collars, it can also adapt to boiler collars that are slightly out of round. The adapter comes with a joint locking strap, boiler collar clamp and a coupler band.

Accessories:

Fire Stop — A firestop may be required anytime Saf-T Vent CI 316 penetrates combustible floors, walls, or ceilings. Remove any insulating material from the floor, wall or ceiling cavity for at least 1" around the vent for diameters 4" - 24". Review fire codes and consult with local building code officials to determine the necessity for a firestop. The stainless steel firestop may be trimmed provided the required clearances are maintained.

Condensate Drain Tube Kit — This kit contains a length of high temperature silicone rubber tubing, a clamp, and two cable ties. The silicone tubing is rated for 500°F, and is translucent to allow inspection of the P-trap. Larger diameter drains can be plumbed directly into a drain system.

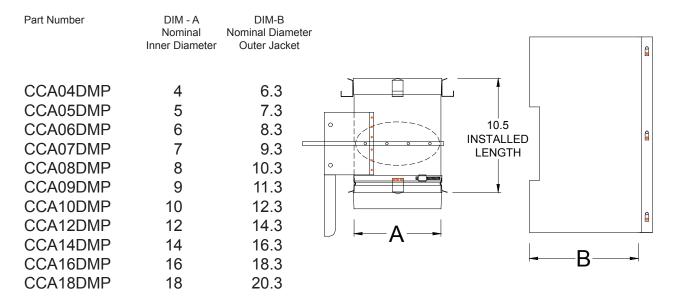

Part Number:

7000TUBE 7000TUBE-10 7001TUBE 5 feet of 3/8" diameter tubing 10 feet of 3/8" diameter tubing 10 feet of 1/2" diameter tubing

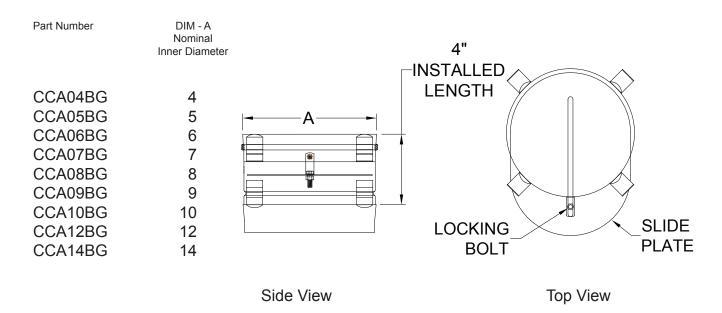

Accessories:

In-Line Damper Section — Use to adjust the flow in positive pressure applications. Can also be used to restrict back flow when the appliance is off. Each damper comes with an 18" long coupler, a locking strap, a rotating clamp, and a motor platform. The shaft is 3/8" diameter.

Vent Flow Regulator — Use only in conjuction with an in-line or termination fan to balance the flow of the exhaust gases when inducing a draft.

Vent Flow Regulator

Accessories:

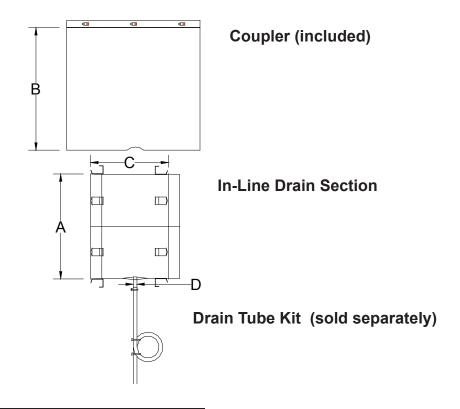

In-Line Probe Section — Use to attach probes to the vent system by means of a 1/4" NPT female fitting. Can be used vertically or horizontally. Comes standard with a coupler made of 430 stainless steel with an outlet for the probe fitting, a 1/4" NPT plug, a locking strap and a rotating clamp for directonal changes.

Accessories:

Horizontal/Vertical In-Line Drain Section — Use to drain away condensate from the vent system. The unique design of this part allows it to be installed in a horizontal, vertical or inclined orientation. Continuous horizontal runs in excess of 30 feet require a condensate drain. High temperature silicone tubing is available separately. The outer jacket consists of an 12" long coupler made of 430 stainless steel with an outlet for the drain and also comes standard with a locking strap and a rotating clamp.

Boot Tees & Covers:

Tee Cover with Drain Fitting — Use at the base of a Boot Tee to drain away condensate from a vent system. High temperature silicone tubing is available separately. The drain cover comes standard with a locking strap and finish coupler. Other drain options are available on larger diameters upon request, contact Heatfab's EngineeringTeam.

Drain Cover

Boot Tees & Covers:

Tee Cover— Use to cap off the male end of a Boot Tee body that is installed horizontally. The tee cover / boot tee combination allows for the future addition of appliances to a common-vent system. The cover comes with a locking strap and a finish coupler that is made of the same 430 stainless steel as the outer jacket to give a finished look to the installation.

Boot Tees:

Boot Tee — Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the boot tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop through the tap for this fitting is equivalent to 15 feet of horizontal vent. Both inlet connections rotate to accommodate direction changes. Each Boot Tee comes standard with a coupler, one joint locking strap and two rotating clamps.

^{*}Also available as a Sloped Boot Tee to allow for easier upward pitch in horizontal runs; p/nSBT-316

**Lateral 45 deg Tees (CCA_LAT) & special Double Lateral Tees (aka Wyes and Double Wyes) are available upon request. Heights are the same as Boot Tees.

Square Tees:

Square Tee — Due to the significant pressure drop of this fitting, Heat-fab recommends it be used as an inspection port only. Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the square tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop through the tap for this fitting is equivalent to 45 feet of horizontal vent. Both inlet connections rotate to accommodate direction changes. Each Square Tee comes standard with a coupler, one joint locking strap, and two rotating clamps.

Barometric Tee

Increasers:

Increaser — Use to upsize a vent system. The term "increaser" is based on an increase in vent diameter in the direction of flue gas motion. Increasers are eccentric to allow for proper drainage of condensate when installed horizontally. Each increaser comes standard with a coupler that will fit the outlet diameter. Other diameter configurations may be available; please contact Heat-fab's Engineering Team to discuss your special needs.

| Part Number | DIM - A Inlet Diameter | DIM - B Outlet Diameter | DIM - C Installed Length |

Increaser

Reducers:

Reducer — Use to downsize the vent system when adding a fan to the system. The term "reducer" is based on an reduction in vent diameter in the direction of flue gas motion. Reducers are eccentric to allow for proper drainage of condensate when installed horizontally. Each reducer comes standard with a coupler that will fit the outlet diameter. Other diameter configurations may be available; please contact Heat-fab's Engineering Team to discuss your special needs.

Straight Lengths:

Horizontal and Vertical —When used horizontally, install vent with a continuous pitch of 1/4" per foot, sloping upward toward the termination, draining back toward the appliance or inline drain. It is important to provide adequate support to a Saf-T Vent CI 316 system, refer to installation instructions for support specifications. Each section comes with a coupler and a joint locking strap.

Adjustable Length:

Long Adjustable Length — The Saf-T Vent CI 316 Adjustable Section serves as a variable length between other components when specific lengths cannot be utilized. The installed length of the adjustable is 13" to 20". Each adjustable section comes with a joint locking strap and a coupler, which can be field cut. It is important to provide adequate support to a Saf-T Vent CI 316 system, refer to installation instructions for support specifications.

Supports:

Guy Support Section — Provides vertical support using a part that is a flue-gas-carrying component of the vent system. Guy sections are primarily installed in long, inaccessible chases or used to provide support to systems with extended lengths above the roofline. Attach the guy section using stainless steel or galvanized cables or chain (supplied by others). Each guy section comes with a coupler and a joint locking strap. Refer to installation instructions for spacing between supports.

Support Hangers:

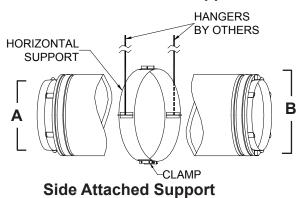

Horizontal Support for Large Diameter — Typical for large diameter support. Provides horizontal support for the Saf-T Vent Cl 316 system. Diameters 24" thru must have support every 6 feet of horizontal run. The support may be attached from the center of the bracket or from the sides of the support bracket. Support hangers by themselves do not maintain the necessary clearances to combustible materials; be sure to consider

clearances when planning the system. Refer to installation instructions for spacing between supports.

Center Attached Support

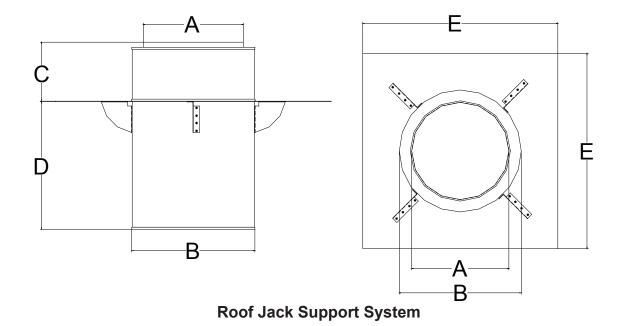

Support Clamp — Typical for smaller diameter support. For use on horizontal systems to provide support at the required 6-foot intervals. Support clamps by themselves do not maintain the necessary clearances to combustible materials; be sure to consider clearances when planning the system. Support clamps are sold in pairs, with two half-shells, and two 1/4-20 nuts and bolts. This part is made from 18-gauge Type 304 stainless steel and should not be installed in the direct path of flue gases. Can also be used as guy support clamps, vertically as well as horizontally. Refer to installation instructions for spacing between supports.

Supports:

Roof Jack Support System— For use with vertical terminations. Use to pass through combustible and noncombustible roof structures. The roof jack support system must be installed on a flat roof or a level curb only. Each roof jack support system includes a storm collar that provides support and when sealed, acts as a water barrier. Cannot be used in a chase with a 1" clearance to vent. Refer to Tall Cone Flashing. Refer to installation instructions for spacing between supports.

Supports:

Tall Cone Flashing and Support— Use as a vertical roof penetration/support in conjunction with a combustible chase. Can be used with a roof curb if needed. Can be used on metal roofs with a 2-12 pitch. This part comes with a storm collar and support screws and is of all stainless steel construction. A Vented Termination Collar *must* be used when installed in a combustible chase and must be ordered separately. CAUTION: the support screws can *only* be installed with Saf-T Vent CI venting.

Terminations:

Wall Penetration — Use to penetrate any combustible or non-combustible wall. This part is a thimble only and does not include any vent. Order enough vent to pass through the thimble and extend 4-8 inches beyond the building sheathing. Includes a finish collar.

| Part Number | Inner Vent Diameter | DIM - A Outer Jacket Diameter | DIM - B Outer Thimble Diameter | DIM - C Face Plate Width | DIM - D Face Plate Height | DIM - E Overall Length | DIM - G Wall Opening |

Wall Penetration

Terminations:

Rain Cap — Use as a termination on vertical systems. Category I and II appliances require a raincap with wind protection. Vent systems for positive pressure appliances may omit the raincap if there are other provisions for draining rainwater from the system. The raincap may also be used as a horizontal termination. Each raincap includes a joint locking strap as well as a storm collar.

| Part Number | DIM - A Nominal Vent Pipe Diameter | DIM - B Cap Installed Height | DIM - C Storm Collar OD | DIM - D Cap OD | - D → |

Screened Termination— Use as a termination on horizontal or vertical systems, as specified or allowed by the appliance manufacturer. The screened termination comes with a joint locking strap and a finish collar. Made of 29-4C material.

Terminations:

Exit Cone — Use as a termination to increase the velocity of the flue gases exiting the stack. The exit cone may also help to reduce ice buildup in cold climates where a rain cap may normally be used. A narrow Finish Collar is included to seal off the 1" air space of the CI 316 vent. The Exit Cone can be attached to EZ Seal Plus/EZ 316 vent systems by folding the EZ Seal Plus/EZ 316 tabs thru the locking strap on the Exit Cone
