Heatfab Saf-T Vent[®]

EZ Seal Plus

Single Wall
Super-ferritic Stainless Steel
UNS S44735 (29-4C)
Special Gas Vent

For Venting Light Commercial & Residential Applications

Condensing Appliances

Category I,II,III,IV Appliances

For Use on Negative, Neutral and Positive Pressures (up to 9" W.C.)

Sizes: 3"- 16" Diameters

Heatfab Saf-T Vent® EZ Seal Plus

Accessories:

Horizontal/Vertical In-Line Drain Section — Use to drain away condensate from the vent system. The unique design of this part allows it to be installed in a horizontal, vertical or inclined orientation. Continuous horizontal runs in excess of 30 feet require a condensate drain. High temperature silicone rubber tubing is available separately, see below.

Condensate Drain Tube Kit — This kit contains a length of high temperature silicone rubber tubing, a clamp, and two cable ties. The silicone tubing is rated for 500°F, and is translucent to allow inspection of the P-trap. Larger diameter drains can be plumbed directly into a drain system.

Part Number:	7000TUBE	5 feet of 3/8" diameter tubing
	7000TUBE-10	10 feet of 3/8" diameter tubing
	7001TUBE	10 feet of 1/2" diameter tubing

Probe Section — Use to attach probes to the vent system by means of a 1/4" NPT female fitting. Can be used vertically or horizontally. Comes with a 1/4" NPT plug.

Part no. 9_01PRB

Gasket Lubricant

It is required to apply gasket lubricant (p/n 7001SIL-5, sold separately) to the factory integral gasket when assembling the pipe. Apply lubricant directly on the inside female pipe end, both edges of gasket. Reference installation manual.

Tee Cover

Tee Cover with Drain Fitting — Use at the base of a tee or boot tee to drain away condensate from a vent system. This type of tee cover may also be used on the leg of a tee that is installed horizontally, to create a drain in a horizontal run. High temperature silicone rubber tubing is available separately from Heatfab, see page 3.

Tee Cover with Drain Fitting

Heatfab Saf-T Vent® EZ Seal Plus

Tees, Boot Tees, & Covers:

Boot Tee — Use vertically or horizontally to add appliances into a common-vent system. When installed horizontally, the male end of the tee body may be capped off with a tee cover to allow for future appliances. When used in conjunction with a drain tee cover, the boot tee will effectively transition a vent system from a horizontal to a vertical orientation while allowing for proper condensate drainage. The pressure drop for this fitting is equivalent to 15 feet of vent. Other diameter configurations may be available; please contact Heatfab Engineering to discuss your special needs.

**Lateral 45 deg Tees & Double Lateral Tees (aka Wye's and Double Wye's) are also available upon special request

Heatfab Saf-T Vent® EZ Seal Plus

Tees, Boot Tees, & Covers:

Conduit Tee — A conduit tee, when installed horizontally, may be fitted with a drain tee cover to create a condensate drain. Due to its high pressure drop, the conduit tee is generally not used to make a transition from horizontal to vertical. (Use a boot tee or an elbow.) The takeoffs are not removable on these tees.

Increasesers & Reducers:

Increaser — Use to upsize a vent system. The term “increaser” is based on an increase in vent diameter in the direction of flue gas motion. Increasesers are eccentric to allow for proper drainage of condensate when installed horizontally. Other diameter configurations may be available; please contact Heatfab’s Engineering Team to discuss your special needs.

Reducer — Use to downsize a vent system. A reducer may only be used when specified or allowed by the appliance manufacturer. The term “reducer” is based on an reduction in vent diameter in the direction of flue gas motion. Reducers are eccentric to allow for proper drainage of condensate when installed horizontally. Other diameter configurations may be available; please contact Heatfab’s Engineering Team to discuss your special needs.

Straight Lengths:

6" Length — Install vent with a continuous pitch of 1/4" per foot, sloping upward toward the termination, draining back toward the appliance or inline drain. It is important to provide adequate support to a Saf-T Vent EZ Seal Plus system. Support horizontal portions of the vent system at 6-foot intervals. Vertical sections should be supported at least every 30-feet and after every offset or transition.

Adjustable Length — Use to accommodate distances not possible with the standard Saf-T Vent EZ Seal lengths. The slip connector serves as an adjustable section and eliminates the need to cut parts to length. The Slip Connector can have an installed length from 6 to 19 inches. It works best in conjunction with another straight length of Saf-T Vent EZ Seal Plus. When used with an elbow or a tee, do not insert the Slip Connector so far that air flow within the vent becomes obstructed. When planning a venting system, include one slip connector for every change of direction and for any spans between two fixed points. Each slip connector comes with three components, a slip section, a male connector and a stainless steel hose clamp.

Straight Lengths:

2 Ft. Length — Install vent with a continuous pitch of 1/4" per foot, sloping upward toward the termination, draining back toward the appliance or inline drain. It is important to provide adequate support to a Saf-T Vent EZ Seal Plus system. Support horizontal portions of the vent system at 6-foot intervals. Vertical sections should be supported at least every 30-feet and after every offset or transition.

Supports:

Guy Support Section — Provides vertical support using a part that is a flue-gas-carrying component of the vent system. Guy sections are primarily installed in long, inaccessible chases or used to provide support to systems with extended lengths above the roof line. Attach the guy section using stainless steel or galvanized cables or chain (supplied by others). Refer to installation instructions for spacing between supports.

Supports:

1" Clearance Horizontal / Vertical Support — Provides support to 3" and 4" diameter Saf-T Vent EZ Seal Plus systems with a 300°F maximum flue gas temperature. When any horizontal run extends for more than 6 feet, a horizontal support must be installed. Subsequent supports are required after every additional 6 feet and every elbow and tee. **Never drill or screw through the flue bearing conduit.**

The 1" clearance may be achieved ONLY when the vent is NOT fully enclosed -- there may be combustible material on a maximum of 3 sides. This support is not recommended for use in Canada unless additional provisions are made to insure that proper clearances are maintained. Combustible material is defined by the NFPA as any material that is capable of being ignited and burned. Common paper-faced sheetrock is considered a combustible material.

2" Clearance Vertical Support — Use to provide support to Saf-T Vent EZ Seal Plus systems while maintaining a 2" clearance to combustible materials. At a minimum, vertical supports are required immediately after any transition to a vertical run of over 10 feet, after any offset in a vertical run, and after every 30 feet of vertical run. These supports may also be used to support long horizontal runs, which require support every 6 feet.

6" & 8" Clearance Horizontal Support — Provides support to 3" and 4" diameter Saf-T Vent EZ Seal Plus systems. When any horizontal run extends for more than 6 feet, a horizontal support must be installed. Subsequent supports are required after every additional 6 feet and every elbow and tee. **Never drill or screw through the flue bearing conduit.**

The 6" clearance horizontal support may be used in Canada on Saf-T Vent EZ Seal Plus systems with a 300°F maximum flue gas temperature when the vent is NOT fully enclosed -- there may be combustible material on a maximum of 3 sides. The 8" clearance horizontal support may be used in the US and Canada on Saf-T Vent EZ Seal Plus systems with a 480°F maximum flue gas temperature when the vent is fully enclosed by combustible materials.

Combustible material is defined by the NFPA as any material that is capable of being ignited and burned. Common paper-faced sheet rock is considered a combustible material.

Support Hangers:

Support Clamp — For use on horizontal systems to provide support at the required 6-foot intervals. Support clamps by themselves do not maintain the necessary clearances to combustible materials; be sure to consider clearances when planning the system. Support clamps are sold in pairs, with two half-shells, and two 1/4-20 nuts and bolts. This part is made from 18-gauge Type 304 stainless steel and should not be installed in the direct path of flue gases. Refer to installation instructions for spacing between supports. **Never drill or screw through the flue bearing conduit.**

Supports:

Vertical Support Leg — For use on vertical systems to provide support. The 20-gauge stainless steel support legs can be used below or above the roof, and can be used in pairs for extra stabilization. Hardware to attach the support to the structure is not provided; attach using best construction methods. Be sure to consider clearances when planning the system.

Never drill or screw through the flue bearing conduit.

May be also used horizontally.

Roof Flashing— Standard roof flashings available from local plumbing suppliers may be used on Saf-T Vent EZ Seal Plus systems with vertical terminations. To properly support the system separate supports may be required above or below the roofline.

Pitched Cone Flashing— For use with single-wall or double-wall Saf-T Vent systems with vertical terminations. Can be used on roofs with a 2/12 - 8/12 pitch. This part comes with a tall storm collar and is made of all stainless steel construction. On single wall Saf-T Vent applications the roof must be of non-combustible material. For sizes larger than 6" diameter the CI Plus/CI Seal Tall Cone Flashing can be used if the roof is of non-combustible material.

Wall Penetration Assembly - without Screen

Heatfab Saf-T Vent® EZ Seal Plus

Thimbles & Penetrations:

Horizontal Wall Thimble — Use to penetrate any interior or exterior combustible or non-combustible wall. This part is a thimble only and does not include any vent -- be sure to order enough vent to pass through the thimble.

To use this thimble, the vent must be uninsulated for a minimum distance prior to passing through a combustible wall. A minimum distance of 18 inches is required for appliance flue gas temperatures up to 400° F. A minimum distance of 6 feet is required for appliance flue gas temperatures of 400 - 480° F.

The opening must be 6-1/2 inches in diameter for both 3 or 4 inch diameter Saf-T Vent systems. The wall thimble is designed to adapt to any wall thickness from 3.5" to 6" thick. If the wall is thicker than 6", the thimble may be extended using a piece of 6" diameter snaplock or welded-seam galvanized pipe. The vent system may be terminated using any terminal Listed for use with the appliance. The wall thimble may be painted to match the decor.
